SUMMARY

Product-minded builder with end-to-end ownership across Healthcare SaaS, EdTech, and AI — from discovery and ICP research through spec writing, launch, and iteration. At Fealty Technologies, diagnosed a retention problem, proposed a full ICP and platform pivot, and drove the repositioned web product to 1,000 active users within two months. Shipped 5 PRDs and 40+ user stories across 3 releases with zero scope creep. Built ExamMate AI — a RAG-based study assistant achieving 95% retrieval accuracy — as a founder would, not as a side project.

EXPERIENCE

Associate Product Manager — Astrava · Project YGC (Gaming-Tech, Pre-Launch) | Remote Apr 2026 – Present

- Conducted user research and market analysis across gamers, developers, and publishers to validate Project YGC's "your game, your rules" positioning ahead of MVP scoping — findings are feeding initial feature prioritization as the team moves into build.
- Supported pre-launch GTM as part of a newly formed founding team — contributed to the waitlist site launch and early positioning work for an India-first, globally-scoped gaming platform.

Product Management Intern — Fealty Technologies · Mediflow (Healthcare SaaS) | Indore Nov 2025 – Apr 2026

- Identified critical ICP mismatch** — pharmacy retailers showed poor Android retention; proposed pivoting ICP to distributors and going web-first. Repositioned web app reached 1,000 active users within two months; mobile crossed 100+ downloads.
- Owled delivery across 3 releases (V1–V3); authored **5 PRDs and 40+ user stories** with granular acceptance criteria — reducing engineering clarification cycles by 30% and enabling a 6-member team to ship on schedule without scope creep.
- Defined specs for OCR invoice scanning, warehouse management, and inventory workflows; translated ambiguous business needs into API-driven requirements across daily standups and stakeholder reviews.

Founder's Office Intern — PM Ready (EdTech — PM Education Platform) | Noida Oct 2025 – Nov 2025

- Operated as **de facto operational owner** — with both founders in full-time product roles, independently drove product strategy, content, marketing, and cross-functional coordination across the platform.
- Mapped competitor landscape across 10+ platforms (NextLeap, Airtribe, Academus) using RICE and MoSCoW; surfaced 3 differentiated product opportunities shaping the V1 roadmap. Gamification improvements drove 20% engagement lift.

PROJECTS & CASE STUDIES

ExamMate AI — AI-Powered Study Assistant | Python · RAG · FAISS · Gemini API · Next.js 14 · Supabase

- Designed and shipped a RAG-based document Q&A system end-to-end — students query their own notes conversationally; achieved 95% retrieval accuracy using FAISS vector indexing and LLM APIs across multi-document corpora.
- Currently iterating as sole PM-engineer: managing roadmap, resolving production blockers (deprecated SDK migrations, embedding model changes), and improving response relevance on a live product.

Google Pay — Pocket Money (UPI Circle) | Product Feature Analysis

- Analyzed Pocket Money's role in closing UPI's structural access gap — extending KYC-free, delegated payment power to unbanked dependents (teens, elderly parents, household staff) via NPCI's UPI Circle, replacing cash handoffs and borrowed-phone workarounds with a ₹15,000 pre-approved cap or real-time approval mode.
- Evaluated the feature's strategic rationale for Google Pay — zero-CAC acquisition and household ecosystem lock-in — and proposed completed-transaction rate (not raw usage) as the north star metric to measure trust over adoption.

Swiggy — Group Ordering Feature Concept | New Feature Addition

- Identified friction in shared meal ordering: groups split across multiple individual orders, inflating delivery fees and killing coordination. Proposed a Group Cart feature — one session, multiple contributors, single checkout — targeting office and hostel user cohorts where the pain is highest.
- Defined core flows: session initiation, invite via link, real-time cart sync, split-payment or single-payer options, and automatic reorder nudge for repeat groups. North star metric: Group Order GMV as % of total orders.

SKILLS

Product & Discovery: · User Research · PRD Writing · Roadmapping · Backlog · Sprint Planning · RICE · HEART · MoSCoW · Agile · Scrum

Growth & Strategy: GTM Strategy · Funnel Optimisation · Retention Strategy · Conversion Optimisation · Performance Marketing · A/B Testing

Analytics: SQL · Mixpanel · Amplitude · GA4 · PostHog · Excel · Google Analytics

AI / Tech: RAG · Prompt Engineering · OpenAI · Gemini · Claude APIs · FAISS · Vector DBs · LLM Eval · Python

Tools: Jira · Figma · Notion · Supabase · GitHub

Certifications: Product Management 101 · SQL

EDUCATION

Bachelor of Computer Applications (BCA) — Presidency College, Bangalore GPA: 8.26 | 2022 – 2025

· Head of Photography Club · State-Level Hockey — Silver Medal
